

ANNUAL REPORT(2024-25)

The year so far has been quite challenging but fascinating and rewarding as our children have been excelling in various fields. In educating today's youth, we can't afford to lose sight of the fact that students need to grapple with the problems of their generation and have to be equipped to take on the world. We set benchmarks for academics and other co-curricular activities and the school calendar tries to maintain this delicate balance. The students with their outstanding performance brought laurels to the school. In all 21 students appeared in class X, 15 of them scored above 90% and the least score was 72%.

Our students, the architects of tomorrow, continue to dazzle with their brilliance from classrooms to the sports arenas, from the stage to the community, their endeavours and. From the accomplishments echo the ethos of the school. This success is not merely academic but a testament to the guidance of our committed educators, the steadfast support of families, and the relentless pursuit of excellence by every member of our school community.

Besides excelling in academics, it gives us immense satisfaction that our students have been very active in the field of co-curricular activities. They are encouraged to participate in various competitions to mention a few, Model United Nations, Science Olympiad, Live Olympiad, NELTAS, CBSE & state level competitions.

To make the students future ready we have regular focused sessions on topics specified by NEP 2020. So far, we have had workshops on gender sensitivity, cyber safety, career counselling and financial management for both the students and teachers from the experts of the fields.

This year the school was given an opportunity to host Children's Science Congress. 59 schools from Kasauli region participated in the event and I am delighted to share that our students won the 2nd prize in senior science quiz, 2nd prize in Innovation model and 1st prize in slogan writing.

The school is a member of Hubs of learning which is a cluster of CBSE schools for the purpose of collaborative growth and enhancement of the quality of education. This forum gives students an opportunity to explore their potential as a number of extra-curricular activities and sports competitions are organized.

Its winning we train our children for but that doesn't mean we don't train them for failure. There are cases when we do fail, we sit down and reflect where we have gone wrong & put ourselves together for yet another challenge.
